DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-11, drawn to a surgical stapler with a cartridge and anvil.

Group II, claim(s) 12-16, drawn to an end effector with pivotable jaw members.

Group III, claim(s) s 17, 32-52, drawn to a robotic system.

Group IV, claim(s) 18-29, 53-68, drawn to a loading unit for use with a surgical instrument.

Group V, claim(s) 30, 31, drawn to a MEMS device and control.

Group VI, claim(s) 69, drawn to a surgical instrument with juxtaposable jaws.

2. The inventions listed as Groups I-VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: In Group I, the special technical feature is a staple cartridge assembly and an anvil. The objective problem posed is to provide a surgical instrument for connecting tissue. In Group II, the special technical feature is a jaw mechanism including a pair of jaw members pivotably coupled to the distal end of an elongate shaft. The objective problem which is addressed by said group of claims is the actuation mechanism of a surgical instrument. In Group III, the special technical feature is a robotic arm and an actuation assembly for controlling operation of a movement of the robotic arm. The objective problem posed is to automate the surgical procedure. In Group IV, the special technical feature of this group of invention is an elongate tubular shaft which allows an end effector to connect to a surgical instrument. The objective problem of said group of claims is to provide a surgical instrument which allows connection of different end effectors. In Group V, the special technical feature of this group of claims is related to the connection the MEMS device to a control box. The objection problem is the electrical connection of the MEMS devices. In Group VI, the special technical feature is an end effector comprising a pair

of juxtaposable jaws and an approximation mechanism for approximating the pair of jaws. The objective problem posed is to achieve a more precise surgical operation.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
